

how are you??

You can specify all wkhtmltopdf options. You can drop `ÄfÄcÄ,Ä€Ä,Ä~ÄfÄcÄ,Ä€Ä,Ä"ÄfÄcÄ,Ä€Ä,Ä™` in option name. If option without value, use `None`, `False` or `ÄfÄcÄ,Ä€Ä,Ä~ÄfÄcÄ,Ä€Ä,Ä™` for dict value:. For repeatable options (incl. allow, cookie, custom-header, post, postfile, run-script, replace) you may use a list or a tuple. With option that need multiple values (e.g. `ÄfÄcÄ,Ä€Ä,Ä"custom-header Authorization secret`) we may use a 2-tuple (see example below).
